- A. By document link in the Notes client
- B. By server name and hard-coded path to the Smart Upgrade database
- C. By database replica ID and database name in the home server cluster
- D. By notes.ini variable on the client listing all servers in the domain the Smart Upgrade database may be found on

Answer: C

4. You want to restrict simple search to enhance server performance by preventing users from searching databases on a server that do not have full-text search enabled. In which of the following locations is this configured?

- A. The server document
- B. The server notes.ini
- C. The server configuration document
- D. The advanced properties of each database

Answer: D

5. Jordan, the Domino administrator, has configured replication probes in DDM but nothing is being reported into the DDM database. What could be the possible cause of this?

- A. Replication is up to date and was attempted, but was considered Null.
- B. Replication was attempted but the destination server could not be reached for the probe check.
- C. Replication was performed and numerous changes were made to the source database and none to the spokes.
- D. Replication was attempted but the source server did not have proper access to replicate so replication was skipped.

Answer: A

6. Liz wishes to disable transaction logging for a particular database on a server with transaction logging enabled. However, she cannot see the Advanced Database Properties to do so. What is the cause of this?

- A. She is not in the Administrators field on the server document.
- B. She cannot selectively turn off transaction logging for individual databases.
- C. She must add the notes.ini line to the server DisableTransLog=name of database.
- D. Transaction logging can only be disabled per document, not for an entire database.

Answer: A
