Answer: D

4. Cheryle would like to have access to her mail file while she is traveling and disconnected from the network. After she arrives at her destination, she wants to connect to the network and synchronize her mail file updates with the server version of her mail file. How can she accomplish this task?

- A. Create a local copy of her mail file.
- B. Create a local replica of her mail file.
- C. Create a local mirror copy of her mail file.
- D. Create a local synchronized copy of her mail file.

Answer: B

5. Kelly supports the Inventory application. This application is accessed by staff in India, the UK, Brazil, and the USA. For reasons of performance and contingency planning, the office in each country has its own server. Kelly needs the Inventory application to reside on each of these servers, and she needs to ensure that the application data and design is kept in sync among all of these locations. How can Kelly meet this requirement?

- A. Select the Inventory application. For each server, create a synchronized copy of the application by selecting File > Synchronization > New Copy
- B. Select the Inventory application. For each server, create a mirror of the application by selecting File > Application > New Mirror, and specify the target Server.
- C. Select the Inventory application. For each server, create a replica of the application by selecting File > Replication > New Replica, and specify the target Server.
- D. Select the Inventory application. For each server, create a copy of the application by selecting File > Application > New Copy. specify the target Server, and select the Synchronize option.

Answer: C

6. Tony wants to create a duplicate of the Video application. He wants to keep a version of the data on the same server as the production application but does not want any new documents or document modifications to be replicated into his new database after he creates it. Which one of the following should Tony do to create his archive?

- A. Create a new copy of the database.
- B. Create a replica copy of the database.

- C. Use Microsoft Windows Explorer to create a copy of the database file.
- D. Create a replica copy of the database and disable replication on the database properties.

Answer: A

7. Tim has enabled document locking in the Sales application. He has noticed some documents that have been locked for several hours. The users tell him that their computers had crashed while they were working on documents. What can Tim do to make the documents unlocked?

- A. Have an administrator run fixup on the database.
- B. Write an agent to run on selected documents. Use the formula:
FIELD \$Lock := @DeleteField
- C. Have someone with Manager access right-click on a locked document and select Unlock Document.
- D. The nightly compact of the database will unlock the documents. Tim can also manually compact the database.

Answer: C
